

Data Analysis

Data Analytics is the process of examining data sets to draw conclusions about the information they contain. It has become a vital part of business decision-making and is used in various industries. The curriculum below aims to provide an introduction to Data Analytics and equip learners with the necessary tools and skills to analyse and visualise data. The curriculum covers data tools and frameworks, Excel, Microsoft PowerBI, SQL, mathematics for data analysis, data analysis with Python, machine learning, and a capstone project.

Objective

- To provide an introduction to Data Analytics, including data tools and frameworks that are commonly used for analysing and visualising data.
- To equip learners with the necessary skills to use Excel and Microsoft PowerBI for data analysis and visualisation, including creating pivot tables, charts, and using data analysis tools.
- To teach learners SQL, including the basics, joins, aggregations, subqueries, and temporary tables, and how to use SQL for data cleaning and window functions.
- To provide an understanding of the mathematics behind Data Analytics, including descriptive and inferential statistics, and regression analysis.
- To teach learners the basics of Python, including data exploration and visualisation using popular libraries like Pandas and Matplotlib.
- To introduce learners to machine learning, including the basics of time series analysis and how it is used in Data Analytics.
- To provide learners with a capstone project that will allow them to apply their skills and knowledge to a real-world problem, and demonstrate their proficiency in data analysis and visualisation.

Curriculum

Months	Module	Courses
1	Introduction	Introduction to Data Analytics Data tools and framework Excel Microsoft PowerBI
2	Data analysis with SQL	SQL Basics SQL join SQL aggregation Subqueries and Temp Tables SQL Data Cleaning Window Functions
3	Mathematics	Descriptive Statistics Inferential Statistics Regression Analysis
	Data analysis with Python	Introduction to Python for Data Analysis Data exploration and visualisation
4	Machine Learning	Introduction to machine learning Time Series Analysis
5	Project	Capstone
