

Data for Business

Business Analytics has become a critical aspect of the decision-making process in various industries, and its importance is growing every day. The curriculum below aims to provide an introduction to Business Analytics and equip learners with the necessary tools and skills to analyse and visualise data. The curriculum covers descriptive statistics, data analysis and visualisation using Excel, Microsoft PowerBI, and Google Looker Studio. Additionally, the curriculum includes an introduction to SQL, Python, and a capstone project.

Objective

- To provide an introduction to Business Analytics, including data types, tools, and frameworks that are commonly used for analysing and visualising data.
- To equip learners with the necessary skills to use Excel for data analysis and visualisation, including creating pivot tables, charts, and using data analysis tools.
- To teach learners how to use Microsoft PowerBI and Google Looker Studio for data analysis and visualisation, including creating reports and dashboards.
- To introduce learners to SQL, including the basics, joins, aggregations, subqueries, and temporary tables, and how to use SQL for data cleaning.
- To teach learners the basics of Python, including data manipulation and visualisation using popular libraries like Pandas and Plotly, and an introduction to Voila for building interactive dashboards.
- To provide learners with a capstone project that will allow them to apply their skills and knowledge to a real-world business problem, and demonstrate their proficiency in data analysis and visualisation.
